GENERIC COVER LETTER

Generative AI Architecture & Enterprise Platforms

Dear Hiring Team,

I am writing to express my interest in senior architecture opportunities where I can contribute to the strategy, governance, and delivery of Generative AI platforms. With more than 15 years of experience across software, solution, and enterprise architecture, I help organizations turn emerging technology into secure, scalable, and reusable business capabilities.

In my current role as GenAI Architecture Lead at Falabella, I lead enterprise standards and approved technology patterns for LLM, RAG, and agent-based solutions. I co-designed the corporate AI Gateway, bringing together LLM Gateway, A2A, MCP, Prompt Management, and RAG as a Service, and defined the company's multi-agent orchestration architecture. I also contribute to AI governance, solution evaluation, disaster-recovery strategies, and the corporate inventory of AI agents and approved technologies.

My approach combines architecture leadership with hands-on engineering. I work with Python, FastAPI, LangChain, LangGraph, Google ADK, GCP, and Azure, and I have built practical internal accelerators such as an LLM-powered repository analyzer, an AI solution evaluation agent, and Harness Fabric, a guardrailed environment for AI-assisted software delivery.

Previously, I led enterprise and software architecture initiatives in banking, insurance, and financial services, including hybrid-cloud modernization, API strategy, Kubernetes/OpenShift adoption, Terraform, LeanIX, and BIAN-aligned governance. This background allows me to connect business priorities, architecture decisions, engineering practices, and delivery outcomes.

I am particularly interested in teams building responsible AI capabilities at enterprise scale and in roles where strategy must translate into working platforms, standards, and measurable impact. I would welcome the opportunity to discuss how my experience can support your organization's current and future technology challenges.

Best regards,

Guillmar Ortiz

Generative AI Architect
