GENERATIVE ARTIFICIAL INTELLIGENCE ARCHITECT | SOFTWARE ARCHITECT | ENTERPRISE ARCHITECTURE, AI PLATFORM STRATEGY, RAG, INTEGRATION WITH LLMS, CLOUD AND MODERNIZATION

ABOUT ME

Generative AI Architect, Software Architect, and Enterprise Architect with over 15 years of experience leading technological modernization, solution architecture, and defining enterprise capabilities in retail, banking, insurance, telecommunications, and manufacturing. Specialized in AI platform strategy, LLMS integration, RAG, agentic architectures, AI governance, cloud/hybrid architecture, and enabling shared capabilities at scale. I combine strategic vision, technical leadership, and hands-on execution to transform technological initiatives into sustainable business capabilities.

GenAI Architecture Lead

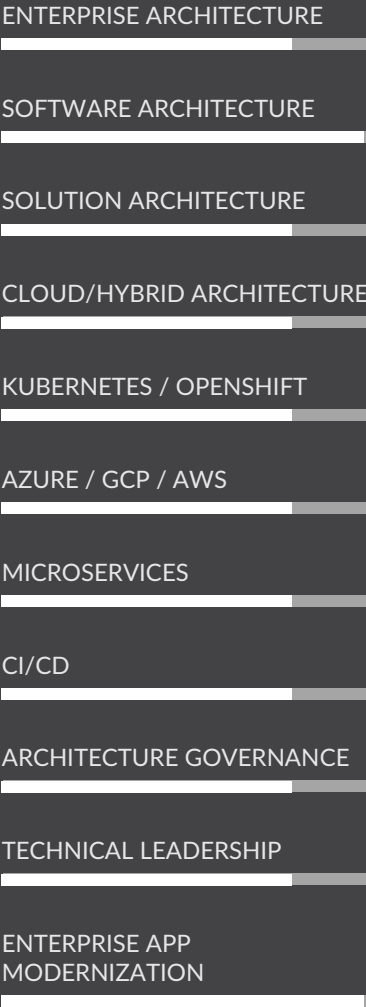

- I lead architecture initiatives for the enterprise adoption of generative artificial intelligence, driving shared AI capabilities within one of the largest retail ecosystems in Latin America.
- I define guidelines, patterns, and technology stack for solutions based on LLMS, RAG, and reusable AI services, focused on scalability, security, and governance.
- I design the architecture of a corporate platform based on agents (agentic), conceived as an AI Gateway for the consumption of LLMS, agents, and MCP-compatible services, enabling shared AI capabilities and strengthening governance, control, and reuse of AI assets at an organizational scale.
- I contribute to the consolidation of enterprise AI pillars in governance, security, technology, and organizational enablement, accelerating the transition from isolated initiatives to a platform vision.
- I contribute to strategic initiatives in customer experience, digital commerce, and software development cycle acceleration through the use of Generative AI capabilities.

FALABELLA

Chile, Santiago RM
Jan 2023- July 2025

Corporate Software Architect

- I drove corporate architecture initiatives aimed at elevating quality and consistency in architectures and enabling development teams with best practices and internal accelerators.
- I led the definition of corporate standards to improve software quality through pipeline standardization and engineering practices.
- I designed and implemented 'Repository Analyzer', an internal solution based on Python and FastAPI to extract insights from repositories and support the generation of technical documentation, strengthening development governance.
- I led and implemented a proposal for generating technical documentation driven by Generative AI, capable of producing documentation and application diagrams from source code, improving the quality and updating of solution documentation.

Nov 2016- May 2018

- I led and actively participated in communities for the adoption of Generative AI, promoting the exchange of technical knowledge and best practices.
- I led the selection process of programming tools driven by generative artificial intelligence for the company's developers.

Corporate Architect (Software Architecture + Enterprise Architecture)

- I served as a transversal architecture reference for multiple companies within the Grupo Security holding, combining perspectives of software architecture and enterprise architecture.
- I led the definition of guidelines, blueprints, reference patterns, and decision criteria for scalable enterprise solutions.
- I participated in defining the hybrid architecture for integrating Azure with corporate datacenters via Azure ExpressRoute, as well as adopting Kubernetes/OpenShift platforms for infrastructure modernization.
- I contributed to strengthening architecture governance using LeanIX, aligned with the BIAN framework, driving API strategy, developing microservices archetypes, adopting IBM API Connect, and evolving the maturity model.

Software Architect

- I acted as a software architect and main technical reference in high-criticality projects for clients in the financial and insurance sectors.
- I technically led the implementation of the Premium Refund Platform for BNP Paribas Cardif, participating in the solution design, end-to-end execution, and successful production release.
- I was an architect and technical reference in the modernization of the Security Factoring Private Site, driving a microservices and Micro-Frontends based architecture.
- I defined architecture guidelines, implementation patterns, cloud deployment practices, CI/CD, and technical direction for development teams.

Tech Lead

- I led the technical coordination of enterprise application initiatives for clients in the banking and insurance sectors, acting as a bridge between hands-on execution and emerging architecture responsibilities.

Full Stack Developer

- Development, evolution, and maintenance of enterprise web applications. Additionally, I applied practices such as GitFlow, SonarQube, ESLint, and agile methodologies to improve code quality and team collaboration.

- Senior Full Stack Developer (Freelance)
 - I led the development of a solution for a financial entity, from defining the base application architecture, designing the presentation layer, developing REST APIs, and integrating with other ecosystem services.
- Full Stack Developer (Freelance)
 - I developed a module for inventory and billing management for the company's ERP platform.
- Senior Web Developer and Service Administrator
 - I made process improvements related to logistics and manufacturing, developed critical modules of the production system, administered Linux servers, and was part of the team responsible for implementing the MES (Manufacturing Execution System) after specialized training in Shenzhen, China.
- Web Developer
 - I developed web applications for automating administrative processes and provided institutional technical support.
